

User Modeling and User-Adapted Interaction

An International Journal

Editor:

Alfred Kobsa; *Dept. of Information Science, University of Konstanz, Germany*

User Modeling and User-Adapted Interaction provides an interdisciplinary forum for the dissemination of new research results on all aspects of user modeling and user-adapted interaction. The journal publishes high quality original papers contributing to these fields, including the following areas:

- acquisition of user and student models
- conceptual models, mental models
- dialog planning and response tailoring
- levels of user expertise
- explanation strategies
- intelligent information retrieval
- plan recognition and generation
- presentation planning
- recognition and correction of misconceptions
- user stereotypes
- formal representation of user and student models
- shell systems for user modeling
- tutoring strategies

Spatial Vision in Humans and Robots

Edited by L. HARRIS and M. JENKIN

This book brings together papers from the 1991 York Conference on Spatial Vision in Humans and Robots. It will be of interest to biological researchers who investigate how the brain solves spatial problems, and also to designers of robots and computer vision systems.

£35.00 net HB 0 521 43071 2 480 pp. 1993

The Logic of Typed Feature Structures

With Applications to Unification Grammars, Logic Programs and Constraint Resolution

BOB CARPENTER

This book develops the theory of typed feature structures, a data structure that generalizes both first-order terms and feature-structures of unification-based grammars to include inheritance, typing, inequality, cycles and intensionality.

£24.95 net HB 0 521 41932 8 352 pp. 1992
Cambridge Tracts in Theoretical Computer Science 32

The Clausal Theory of Types

D. A. WOLFRAM

This book introduces a theory of theorem-proving based on a lambda-calculus formulation of a clausal logic with equality, known as the Clausal Theory of Types.

£24.95 net HB 0 521 39538 0 132 pp. 1993

Research and Development in Expert Systems IX

Proceedings of 12th Annual Technical Conference of the BCS Specialist Group, December 1992

Edited by M. A. BRAMER and R. W. MILNE

This volume contains the refereed and invited papers which were presented at Expert Systems 92. Together with its predecessors this is essential reading for those who wish to keep up-to-date with developments and opportunities in this important field.

Modelling Auditory Processing and Organisation

MARTIN COOKE

This book describes a system which separates multiple, simultaneous acoustic sources using strategies based on those used by humans. It reviews recent work on the modelling of auditory processes, and presents a new model which is evaluated by measuring its ability to separate speech from a wide variety of other sounds, including music, phones, and other speech.

£22.95 net HB 0 521 45094 2 136 pp. 1993
Distinguished Dissertations in Computer Science 7

Deduction and Declarative Programming

P. PADAWITZ

Here Dr Padawitz emphasises verification based on logical inference rules, i.e. deduction (in contrast to model-theoretic approaches, deductive methods can be automated). His unique treatment captures the actual styles and applications of programming; neither too general with respect to the underlying logic nor too restrictive for the practice of programming.

£27.95 net HB 0 521 41723 6 288 pp. 1992
Cambridge Tracts in Theoretical Computer Science 28

Logic Programming

Operational Semantics and Proof Theory

J. ANDREWS

Dr Andrews here provides a homogeneous treatment of the semantics of both theoretical and practical logic programming languages. Researchers interested in logic programming or semantics, as well as artificial intelligence search strategies will want to consult this book as the only source for some essential and new ideas in the area.

The Computer User as Toolsmith

The Use, Reuse and Organization of Computer-based Tools

SAUL GREENBERG

This book describes several empirical studies from which the author has developed a computer version of a handyman's workbench that would help users with their online activities. For the practitioner and interface designer, the guidelines and principles offered here are directly applicable to the rational design of new systems and the modernisation of old ones.

A major forum for research in decision making...

JOURNAL OF BEHAVIORAL DECISION MAKING

EDITOR

GEORGE WRIGHT
University of
Strathclyde
UK

ASSOCIATE EDITOR

J. FRANK YATES
University of Michigan,
USA

The Journal of Behavioral Decision Making is a multidisciplinary journal with a broad base of content and style. The objective of the Journal is to present and stimulate behavioral research on decision making and to provide a forum for the evaluation of complementary, contrasting and conflicting perspectives. These perspectives include: psychology, management science, sociology, political science and economics.

Papers published in the Journal will encompass, but not be limited to, the following areas:

- ▶ Individual decision making
- ▶ Management science and decision aids
- ▶ Interpersonal and small group decision making
- ▶ Organizational decision making
- ▶ Strategic decision making
- ▶ Social and political structuring of decision making
- ▶ Behavioral economics
- ▶ Expert systems
- ▶ Consumer decision making
- ▶ Behavioral accounting
- ▶ Medical and clinical decision making

The knowledge engineering review

Notes for Contributors

Contributions for publication should be addressed to Dr John Fox, Editor, The Knowledge Engineering Review, Biomedical Computing Unit, PO Box 123, Lincoln's Inn Fields, London WC2A 3PX, England, Dr Peter Jackson, North American Editor, Department of Electrical and Computer Engineering, Clarkson University, Potsdam, NY 13699-5720, USA; or may be submitted through a member of the Editorial Advisory Board (address inside front cover). Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.

Gale, W A, ed 1986. *Artificial Intelligence and statistics*, Reading, Massachusetts: Addison-Wesley

Pearl, J 1984. *Heuristics. Intelligent search strategies for problem solving*, Reading, Massachusetts: Addison-Wesley

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* 3 (1) pp1-34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems*, 3 (2) pp 100-111.

Twenty Five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned.
