

Editor's note

The first issue of the Review included an annotated bibliography of literature on Expert Systems. Entries on machine induction included one by the editor, published in the SPL Insight Bulletin, Vol. 2, No. 2, as part of a debate on induction with Donald Michie. A reference to Professor Michie's paper "Computer induction as a knowledge — aquisition tool" was accidentally omitted from the bibliography and the editor would like to apologise for this oversight.
