Articles

The effect of median filtering on edge estimation and detection

A. C. Bovik, T. S. Huang, and D. C. Munson, Jr.
Simple parallel hierarchical and relaxation algorithms for segmenting noncausal markovian random fields

F. S. Cohen and D. B. Cooper
Scene segmentation from visual motion using global optimization

D. W. Murray and B. F. Buxton
Optical flow estimation: An error analysis of gradient-based methods with local optimization

J. K. Kearney, W. B. Thompson, and D. L. Boley
Image estimation using doubly stochastic Gaussian random field models

J. W. Woods, S. Dravida, and R. Medivilla

The nearest neighbor and the Bayes error rates

G. Loizou and S. J. Maybank

Structuring free space as a hypergraph for roving robot path planning and navigation

K. D. Rueh and A. K. C. Wong

On the recognition of printed characters of any font and size

S. Kahan, T. Pavlidis, and H. S. Baird

Learning and plan refinement in a knowledge-based system for automatic speech recognition

R. de Mori, L. Lam, and M. Gilloux

A rule-based system for verifying engineering specifications in industrial visual inspection applications

D. Petkovic and E. B. Hinkle

ANNOUNCING A NEW JOURNAL

Journal of Intelligent & Robotic Systems

The theory and practice of intelligent and robotic systems is currently one of the most fashionable and promising areas in Computer and Systems Science and Engineering, and will certainly play a primary role in future life. The objective of the *Journal of Intelligent and Robotic Systems: Theory and Applications (JIRSTA)* is to provide a source linking all fields where the *systems intelligence* plays a dominant role, and to stimulate interaction between workers carrying out theoretical and applied research in the following representative (but nonexhaustive) areas:

- Learning theory and knowledge acquisition
- Dynamic memory in learning
- Logic and grammatical inference
- Computer theorem proving and problem solving
- AI programming languages
- Intelligent data base architectures
- Intelligent decision support systems
- Inference under uncertainty
- Intelligent text and signal processing
- Expert systems and applications (diagnosis, supervision/maintenance, etc.)
- Expert-System-Aided CAD
- Kinematics, dynamics, and control of robots
- Robot programming languages
- Flexible manufacturing systems
- Computer integrated manufacturing systems
- Computer vision
- Robot applications
- Prosthetics
- Intelligent control systems
- Intelligent microprocessor-based systems
- Other applications (management, economic, etc.)

Main features of accepted papers will be originality, novelty, timeliness, and clarity of presentation. Papers that suggest new avenues of research or new developments on any aspect of the subject matter of JIRSTA are most welcome.

Journal of Intelligent & Robotic Systems is to be published by D. Reidel Publishing Company. Issues will appear quarterly, the first in Spring 1988. Detailed information is available from the publishers. Articles for publication should be submitted (in triplicate) to JIRSTA, The Journals Office, D. Reidel Publishing Company, P.O. Box 17, 3300 AA Dordrecht, Holland. Tel. (31) 78-334209. Telex: 29245 kapg nl.
