

Introducing The Computer Journal

**The international journal of information technology
and computer applications**

*Editor-in-Chief P Hammersley, Middlesex Polytechnic, The Burroughs, Hendon,
London NW4 4BT, UK*

Coverage

The Computer Journal is one of the world's most eminent periodicals in the field of information technology and computer applications. Its coverage is unmatched by any other computing periodical. It includes advanced programming, computer science theory, databases, hardware and logic design and business applications. It also covers the newer disciplines such as parallel computing, object-oriented programming, logic programming and electronic publishing. Papers are always in the mainstream of new developments; their results are significant and far reaching; above all they are readable.

Type of Articles Published

The Computer Journal publishes original research papers, practical accounts of the latest developments and their likely impact, shorter communications, correspondence about recently published articles, and review articles.

The quality and scope of The Computer Journal can be seen from just a selection of recent and forthcoming articles. Send for a free sample copy and see for yourself!

Subscription information

The Computer Journal (ISSN 0010-4620), Volume 34: February, April, June, August, October and December 1991. £174 for UK subscribers, £185 for subscribers elsewhere.

A NEW journal in the applications of categorical,
algebraic and geometric methods in Computer Science

Mathematical Structures in Computer Science

Why a new journal?

Mathematical Structures in Computer Science (MSCS) is a new journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from algebra, geometry or category theory form a basis for the work. MSCS is distinct from existing titles in that it specialises in the art of applying mathematics of genuine interest and general applicability to computer science; its objective is to promote the useful application of high level mathematics to language design and software implementation. The journal will increase the circulation of new results in this fast growing area.

Editor-in-Chief

G Longo
*Ecole Normale Supérieure, 45 rue
d'Ulm, 75230 Paris (email:

Models of Brain Function

RODNEY M. J. COTTERILL

Recent progress has been such that it now seems realistic to look towards an explanation of mind in terms of the brain's anatomy and physiology. This book presents a comprehensive overview of the current state of brain modelling, containing contributions from many leading researchers in this field. It will be of interest not only to researchers in the fields of brain science and neurobiology, but to psychologists and those involved in the study of artificial intelligence.

£42.50 net HB 0 521 38503 2 574 pp. 1990

Foundations of Artificial Intelligence

A Sourcebook

Edited by **DEREK PARTRIDGE** and
YORICK WILKS

This outstanding collection is designed to address the fundamental issues of principles underlying the task of Artificial Intelligence. The editors have selected not only papers now recognised as classics but also many specially commissioned papers which together examine the methodological and theoretical foundations of the discipline from a variety of perspectives.

£45.00 net HB 0 521 35103 0 512 pp. 1990
£15.00 net PB 0 521 35944 9

Updating Logical Databases

MARIANNE WINSLETT

This book tackles the problems of update algorithms for databases. The author has produced a formal method for specifying the desired change intentionally, using a 'formula-based' approach to updating needs rather than a 'model-based' technique. The complexity of the algorithms, choice of semantics and a means of enforcing integrity constraints are also discussed.

£20.00 net HB 0 521 37371 9 224 pp. 1990
Cambridge Tracts in Theoretical Computer Science 9

Modeling Brain Function

The World of Attractor Neural Networks

DANIEL J. AMIT

This book introduces the techniques brought from physics to the study of neural networks and the insights they have stimulated. It is written at a level accessible to the wide range of researchers working on these problems – statistical physicists, computer scientists and cognitive psychologists. The author has been careful to give a coherent and non-technical presentation of all the basic ideas.

£27.50 net HB 0 521 36100 1 528 pp. 1989

Now in paperback

Formal Methods in Artificial Intelligence

ALLAN RAMSAY

Artificial Intelligence has recently turned to formal logic in the search for powerful knowledge representation languages. Covering a wide range of topics, this book is aimed at all researchers in artificial intelligence.

c.£13.95 net PB 0 521 42421 6 296 pp. 1991
Cambridge Tracts in Theoretical Computer Science 6

Formal Semantics and Pragmatics for Natural Language Querying

JAMES CLIFFORD

This book discusses the connection between the areas of semantics, namely the semantics of databases and the semantics of natural language, and links them via a common view of the semantics of time. A formal model for the interpretation of questions is presented in this work which will form the basis for much further research.

£19.50 net HB 0 521 35433 1 208 pp. 1990

A Theory of Computer Semiotics

Semiotic Approaches to Construction and Assessment of Computer Systems

P. B. ANDERSEN

Computer semiotics studies the special nature of computer-based signs and how they function in use. This book is based on ten years research on computer usage in work situations and it presents a novel approach to the subject, that is both theoretically systematic and practical.

£30.00 net HB 0 521 39336 1 424 pp. 1991

Human Factors for Informatics Usability

Edited by **BRIAN SHACKEL** and **SIMON RICHARDSON**

Human factors is one of the critical issues in information technology, as industry realises the need to change from technology-orientated goals to meet the demands of computer users. This book has been developed from lectures to provide a comprehensive introduction and a thorough guide to what is known about informatics usability, and how it can solve practical problems.

£35.00 net HB 0 521 36570 8 452 pp. 1991

Hypertext Research Practice

C. McKNIGHT, A. DILLON and **J. RICHARDSON**

Hypertext is the term coined for the storage of electronic data, whether it be textual or graphic, in such a way that the whole file becomes an electronic 'concordance'. Rather than simply summarise everything that has gone before, it aims to provide a position statement from which further work may be suggested.

Research and Development in Expert Systems VII

Proceedings of 10th Annual Technical Conference of the BCS Specialist Group, September 1990

Edited by **T. R. ADDIS** and **R. M. MUIR**

Three issues are examined in this volume: cybernetics, databases and programming languages. These issues reflect the ubiquity of expert systems, showing how the methods are helping to expand other areas of technology. It will be essential reading for those who wish to keep up to date with developments in this field.

Logic and Information

KEITH DEVLIN

A noted expositor and regular *Guardian* columnist provides a ground-breaking discussion on the nature of logic. He develops his theory in general and intuitive terms and explores its relevance to a variety of concerns such as artificial intelligence, cognition, natural language and communication. Readers whose imaginations have been stimulated by books such as *The Liar* and *The Emperor's New Mind* will find this unique book equally thought-provoking.

The knowledge engineering review

Notes for Contributors

Contributions for publication should be addressed to Dr John Fox, Editor, The Knowledge Engineering Review, Biomedical Computing Unit, PO Box 123, Lincoln's Inn Fields, London WC2A 3PX, England, Dr Peter Jackson, North American Editor, McDonnell-Douglas Research Lab, Artificial Intelligence Group, PO Box 516, St Louis, MO 63166, USA, or may be submitted through a member of the Editorial Advisory Board (addresses inside front cover). Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.

Gale, W A, ed 1986. *Artificial Intelligence and statistics*, Reading, Massachusetts: Addison-Wesley

Pearl, J 1984. *Heuristics. Intelligent search strategies for problem solving*, Reading, Massachusetts: Addison-Wesley

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* 3 (1) pp1-34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems*, 3 (2) pp 100-111.

Twenty Five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned.
