

A major forum for research in decision making...

JOURNAL OF BEHAVIORAL DECISION MAKING

EDITOR
GEORGE WRIGHT
University of
Strathclyde
UK

ASSOCIATE EDITOR
J. FRANK YATES
University of Michigan,
USA

The Journal of Behavioral Decision Making is a multidisciplinary journal with a broad base of content and style. The objective of the Journal is to present and stimulate behavioral research on decision making and to provide a forum for the evaluation of complementary, contrasting and conflicting perspectives. These perspectives include: psychology, management science, sociology, political science and economics.

Papers published in the Journal will encompass, but not be limited to, the following areas:

- * Individual decision making
- * Management science and decision aids
- * Interpersonal and small group decision making
- * Organizational decision making
- * Strategic decision making
- * Social and political structuring of decision making
- * Behavioral economics
- * Expert systems
- * Consumer decision making
- * Behavioral accounting
- * Medical and clinical decision making

Decision Support Systems

The International Journal

Editors-In-Chief:

Hans-Jochen Schneider, ACTIS zentrale
Verwaltungs-GmbH, P.O. Box 800144,
D-7000, Stuttgart 80, Germany

Andrew Whinston, MSIS Department, CBA
5-202, University of Texas, Austin, TX 78712,
USA

Assistant to the Editors-In-Chief:

Dimitris Karagiannis, FAW-Ulm, P.O. Box
2060, D-7900 Ulm, Germany

AIMS AND SCOPE

Education in the field of **Decision Support Systems (DSS)** is following two strictly separate curricula. On the one side there is a computer science curriculum which is very much technically oriented, while on the other side a curriculum of management science exists, aimed at educating business oriented people.

Decision Support Systems covers these separate subject areas including

- Conceptual and Operational Bases of DSS;
- Normative Theories of Decision Making;
- Cognitive Science; - Positive Theorems of Decision Making; - Mathematical Modelling;
- Linguistics; - Simulation; - Algorithms;
- Reasoning Process; - Artificial Intelligence;
- Theoretical Models of DSS; - Implementation Techniques - Application Areas

The Journal encourages both further investigations by providing a forum for advances in the DSS field, and facilitates research by providing an efficient mechanism for researchers to keep up with the efforts of others. **Decision Support Systems** therefore serves as a forum for: * Researchers and Developers of DSS * Researchers and Practitioners in Computer Science, Management and Business Administration * Computer Manufacturers * Proprietary Software Developers * Managers in Industry, Commerce and Public Administration

The inclusion of survey papers promotes a broader understanding of the various facets of DSS research and signals research ideas that are ready for application. Notices of meetings, abstracts of selected research reports and reviews of books are also published.

ABSTRACTED/INDEXED IN: Cambridge Scientific Abstracts, INSPEC, ISI, ACM Computing Reviews, Engineering Abstracts, UMI Data Courier

Subscription Information:

1991: Volume 7 in 4 issues
Price: US\$ 193.50 / Dfl. 325.00
(postage/handling included)
ISSN: 0167-9236

The Dutch Guilder (Dfl.) price is definitive. US\$ price is subject to exchange rate fluctuations.

Introducing The Computer Journal

The international journal of information technology and computer applications

Published for the British Computer Society by Cambridge University Press

Editor-in-Chief P Hammersley, Middlesex Polytechnic, The Burroughs, Hendon, London NW4 4BT, UK

"This journal is a valuable addition to every good collection in the computer sciences"

MAGAZINES FOR LIBRARIES

Coverage

The **Computer Journal** is one of the world's most eminent periodicals in the field of information technology and computer applications. Its coverage is unmatched by any other computing periodical. It includes advanced programming, computer science theory, databases, hardware and logic design and business applications. It also covers the newer disciplines such as parallel computing, object-oriented programming, logic programming and electronic publishing. Papers are always in the mainstream of new developments; their results are significant and far reaching; above all they are readable.

Type of Articles Published

The **Computer Journal** publishes original research papers, practical accounts of the latest developments and their likely impact, shorter communications, correspondence about recently published articles, and review articles.

The quality and scope of The Computer Journal can be seen from just a selection of recent and forthcoming articles. Send for a free sample copy and see for yourself!

Special Issues

In recent years the number of excellent papers submitted to **The Computer Journal** has grown enormously. The editors have therefore introduced a new method for selecting papers to be published: the bimonthly issues now identify state-of-the-art themes and publish new papers of general interest related to those themes. This will maintain **The Computer Journal** as a leading medium in all aspects of computer science and computer applications. Most issues use only half the available space for the theme papers, and papers of a more general nature take up the rest of the space. All papers will still be refereed in the usual way and the emphasis is on the highest standards.

Why you must read The Computer Journal...

Whatever your level and area of interest, you'll find **The Computer Journal** readable, up-to-date, informative, exciting and topical. It gives independent and authoritative coverage of the most important and significant new areas of research and their applications.

Subscription information

The Computer Journal (ISSN 0010-4620), Volume 34: February, April, June, August, October and December 1991. £174 for UK subscribers, £185 for subscribers elsewhere.

KER

Introducing...

Robotica

International Journal of Information, Education and Research in Robotics and Artificial Intelligence

Editor

Professor J Rose, *Honorary Director of the World Organisation of Systems and Cybernetics*

Deputy Editors

Dr E W Kent, *Philips Laboratories, Briarcliff Manor, NY, USA*

Professor R A Jarvis, *Monash University, Victoria, Australia*

Professor Y Umetani, *Tokyo Institute of Technology, Japan*

Dr P Coiffet, *CRIF, Paris, France*

Editor, Robotics Reports and Surveys

Professor B H Rudall, *University College of North Wales, Bangor, UK*

There is increasing interest in automation, particularly in industry. *Robotica*, published by Cambridge University Press, is now the most prestigious journal of its kind in the world. It provides an international forum and encourages developments by covering all aspects of this important subject area. It endows robotics with an authoritative, competent and dedicated journal to serve industry, research and education.

Increased page extent and new look for 1991

The quantity of excellent material that is now received for publication is such that we have increased the extent of *Robotica* by almost 20% for 1991 (and over 100% since its inception in 1982). So now you have even more quality articles in your quarterly issues. And in order to reflect the forward-looking attitude of the journal and its editors, *Robotica* has been given a face lift. We hope that you like the new design.

'So often students will ask "What courses of study do you recommend as preparation for a career in robotics?"...read *Robotica*.'

J F ENGELBERGER, *PRESIDENT, UNIMATION INC., CONNECTICUT*

Why you should subscribe to *Robotica*

- ◆ As well as original papers, *Robotica* contains Reports and Surveys, Book Reviews, Conference News, Announcements and Letters to the Editor, so you can get a comprehensive view of current developments
- ◆ Compared with other periodicals in the field *Robotica* represents excellent value for money
- ◆ *Robotica* covers both theoretical and practical issues in a wide context
- ◆ Papers are of a very high scientific quality and have gone through rigorous refereeing
- ◆ Papers are received from all over the world, not just from the US and Japan as in many other journals
- ◆ The spread of subjects covered provides the most accurate picture of current worldwide activity that you are likely to be able to get

Subscription Information

Volume 9 in 1991, published in January, April, July and October. Individuals £45, UK institutions £95, institutions elsewhere £99, airmail £16 per year extra. ISSN 0263-5747

The knowledge engineering review

Notes for Contributors

Contributions for publication should be addressed to Dr John Fox, Editor, The Knowledge Engineering Review, Biomedical Computing Unit, PO Box 123, Lincoln's Inn Fields, London WC2A 3PX, England, Dr Peter Jackson, North American Editor, McDonnell-Douglas Research Lab, Artificial Intelligence Group, PO Box 516, St Louis, MO 63166, USA, or may be submitted through a member of the Editorial Advisory Board (addresses inside front cover). Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.

Gale, W A, ed 1986. *Artificial Intelligence and statistics*, Reading, Massachusetts: Addison-Wesley

Pearl, J 1984. *Heuristics. Intelligent search strategies for problem solving*, Reading, Massachusetts: Addison-Wesley

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* 3 (1) pp1-34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems*, 3 (2) pp 100-111.

Twenty Five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned.
